Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/581,107	Applicant(s) SCHMIDT ET AL.
	Examiner Kile Blair	Art Unit 2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED. (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 02 March 2010.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1,3-6 and 8-11 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 1,3-6 and 8-11 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO/US/06)
Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____

5) Notice of Informal Patent Application

6) Other: _____

DETAILED ACTION

This Office action is in response to the communication filed on 3/2/10. Claims 1, 3-6, and 8-11 are pending. Claims 2 and 7 are canceled.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 6, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over IEEE (E.D. Scheirer: "The MPEG-4 Structured Audio Standard" ACOUSTICS, SPEECH AND SIGNAL PROCESSING, 1998. PROCEEDINGS OF THE 1998 IEEE INTERNATIONAL CONFERENCE ON SEATTLE, WA. USA, 12-15 May 1998, vol. 6, pages 3801-3804, IDS 5/31/06) in view of Lifshitz (US 6833840 B2, PTO-892 7/21/09).

Regarding claim 6, IEEE teaches a method for decoding impulse responses of audio signals by an MPEG-4 decoder (coding flat speech with a synthetic reverb in MPEG-4, IEEE, pg. 3803, right hand column, ¶ 3-4), wherein said impulse responses allow reproduction of sound signals corresponding to a certain room characteristic (impulse response that creates a particular reverberation effect, IEEE, pg. 3803, left hand column, ¶ 2), comprising: receiving, at an MPEG-4 decoder, one or more impulse responses in multiple successive MPEG-4 fields of an MPEG-4 BIFS stream (MPEG-4

BIFS, pg. 3803, right hand column, ¶ 2), wherein a first of said multiple successive MPEG-4 fields includes information about the following MPEG-4 fields (audio samples which are blocks of floating point data which make up a bit stream header; the bit stream contains several simple parameters for algorithmic modification, IEEE, pg. 3803, left hand column, ¶ 2), said information comprising a number of the following MPEG-4 fields used and a number of impulse responses transmitted (there is inherently information on the number of impulse responses in order for the header to be understood for configuration as disclosed, pg. 3803, left hand column, ¶ 2-3), and wherein said following MPEG-4 fields include for each of said impulse responses a length information of the impulse response and samples representing the impulse response (it is inherent in the disclosure of a particular reverberation effect that each different reverberation effects has a different length where the length is related to the delay/reverberation time associated with the specific effect as described in lines 21-27, pg. 7 of applicant's specification, pg. 3803, left hand column, ¶ 2); separating said samples representing said one or more impulse responses based on said information in said first MPEG-4 field and said length information in said following MPEG-4 fields by said MPEG-4 decoder (configuring synthesis engine, pg. 3803, left hand column, ¶ 2-3); and using said one or more impulse responses represented by said separated samples for calculation of a reverberation effect corresponding to said room characteristic (creating reverberation effect, pg. 3803, left hand column, ¶ 2).

Although IEEE does not explicitly teach the feature wherein the successive MPEG-4 fields are MPEG-4 PROTO params fields, Lifshitz teaches a PROTO for use in

an MPEG-4 scene (Lifshitz, col. 4, lines 27-53). It would have been obvious to one of ordinary skill in the art to use PROTO params fields in the method of IEEE with the motivation of avoiding repetition of information in order to save bandwidth and authoring effort as disclosed by Lifshitz (col. 4, lines 27-31).

Claim 1 is substantially similar to claim 6 and is rejected for the same reasons.

Claim 11 is substantially similar to claim 1 and is rejected for the same reasons since there must be an apparatus or computer program embodied on a computer readable medium to carry out the method as disclosed by IEEE in view of Lifshitz in claim 1.

Claims 3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over IEEE in view of Lifshitz further view of (Koenen, Rob. Coding of Moving Pictures and Audio: MPEG-4 Overview (V.21 - Jeju Version), Rep. No. ISO/IEC JTC1/SC29/WG11 N4668., International Organization for Standardization. 2002. 1-79, hereinafter as "Koenen", PTO-892 10/3/08).

Regarding claim 3, IEEE in view of Lifshitz teaches the method according to claim 1.

Although IEEE in view of Lifshitz does not explicitly teach the feature wherein a scalable transmission of the room impulse responses is enabled, Koenen teaches that MPEG-4 coding can be used to create reverb using scalability (Koenen, pg. 64, §12, ¶ 2). It would have been obvious to use the scalability as disclosed by Koenen in the

method of IEEE in view of Lifshitz since using known features of an industry standard to implement the reverberation disclosed by IEEE would have yielded predictable results.

Regarding claim 8, IEEE in view of Lifshitz teaches the method according to claim 6.

Although IEEE in view of Lifshitz does not explicitly teach the feature wherein the room impulse responses are received following a scalable transmission of said room impulse responses, Koenen teaches that MPEG-4 coding can be used to create reverb using scalability (Koenen, pg. 64, §12, ¶ 2). It would have been obvious to use the scalability as disclosed by Koenen in the method of IEEE in view of Lifshitz since using known features of an industry standard to implement the reverberation disclosed by IEEE would have yielded predictable results.

Claims 4, 5, 9, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over IEEE in view of Lifshitz further view of Koenen and in further view of (Scheirer, Eric D. "Structured audio and effects processing in the MPEG-4 multimedia standard." MULTIMEDIA SYSTEMS 7 (1999): 11-22, hereinafter as "Multimedia Systems", PTO-892 10/3/08).

Regarding claim 4, IEEE in view of Lifshitz in further view of Koenen teaches the method according to claim 3.

Although IEEE in view of Lifshitz in further view of Koenen does not explicitly teach the feature wherein in a broadcast mode short versions of room impulse responses are frequently transmitted and a long sequence is less frequently

transmitted, Multimedia Systems teaches that, in an MPEG-4 coder, a scene in a large hall will have reverb added, somewhat less reverb added to dialog, and no reverb added to the music based on the needs of the scene (Multimedia Systems, pg. 16, §3.1, ¶ 2- pg. 17, §3.1, ¶ 2). It would have been obvious to one of ordinary skill in the art to transmit the shorter version of impulse responses more frequently with the motivation of conserving transmission capacity as is done with transmission of few parameters sufficient enough to reproduce the scene as disclosed (Multimedia Systems, pg. 13, §2.3.2, ¶ 1-4).

Regarding claim 5, IEEE in view of Lifshitz in further view of Koenen teaches the method according to claim 3.

Although IEEE in view of Lifshitz in further view of Koenen does not explicitly teach the feature wherein in an interleaved mode a first part of the room impulse responses is frequently transmitted and the later part of the room impulse responses is less frequently transmitted, Multimedia Systems discloses the interleaving mode of transmitting the timbre of a piano frequently when redundancies exist (Multimedia Systems, pg. 13, §2.3.2, ¶ 1-4). It would have been obvious to one of ordinary skill in the art to apply the same mode to the reverberation effects with the motivation of conserving transmission capacity (Multimedia Systems, pg. 11, §1, ¶ 3- pg. 12, §1, ¶ 3) since Multimedia Systems discloses that the same tool are used for effects processing as the music reproduction (Multimedia Systems, pg. 13, §2.3.2, ¶ 4).

Regarding claim 9, IEEE in view of Lifshitz in further view of Koenen teaches the method according to claim 8.

Although IEEE in view of Lifshitz in further view of Koenen does not explicitly teach the feature wherein in a broadcast mode short versions of room impulse responses are frequently received and a long sequence is less frequently received, Multimedia Systems teaches that, in an MPEG-4 coder, a scene in a large hall will have reverb added, somewhat less reverb added to dialog, and no reverb added to the music based on the needs of the scene (Multimedia Systems, pg. 16, §3.1, ¶ 2- pg. 17, §3.1, ¶ 2). It would have been obvious to one of ordinary skill in the art to transmit the shorter version of impulse responses more frequently with the motivation of conserving transmission capacity as is done with transmission of few parameters sufficient enough to reproduce the scene as disclosed (Multimedia Systems, pg. 13, §2.3.2, ¶ 1-4).

Regarding claim 10, IEEE in view of Lifshitz in further view of Koenen teaches the method according to claim 8.

Although IEEE in view of Lifshitz in further view of Koenen does not explicitly teach the method according to claim 8, wherein in an interleaved mode a first part of the room impulse responses is frequently received and the later part of the room impulse responses is less frequently received, Multimedia Systems discloses the interleaving mode of transmitting the timbre of a piano frequently when redundancies exist (Multimedia Systems, pg. 13, §2.3.2, ¶ 1-4). It would have been obvious to one of ordinary skill in the art to apply the same mode to the reverberation effects with the motivation of conserving transmission capacity (Multimedia Systems, pg. 11, §1, ¶ 3- pg. 12, §1, ¶ 3) since Multimedia Systems discloses that the same tool are used for effects processing as the music reproduction (Multimedia Systems, pg. 13, §2.3.2, ¶ 4).

Response to Arguments

Applicant's arguments filed 3/2/10 have been fully considered but they are not persuasive.

Applicant argues that the inclusion of impulse response data is not equivalent to inserting into a first field type data about multiple successive fields of the same type, however the examiner asserts that the claimed limitation is met by the header of IEEE (pg. 3803, left hand column, ¶ 2).

Applicant argues that a combination of IEEE and Lifshitz would not make the claimed invention obvious since IEEE and Lifshitz do not teach MPEG-4 PROTO params fields, however the examiner asserts that the combination of IEEE and Lifshitz teaches the feature since Lifshitz discloses using a PROTO, where parameters are linked to node fields in the PROTO code (Lifshitz, col. 4, lines 34-37).

Applicant's arguments with respect to Koenen and Multimedia Systems are not persuasive for the same reasons.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kile Blair whose telephone number is (571) 270-3544. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivian Chin can be reached on (571) 272-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
